

ISO 50001 ACCREDITATION

Building a foundation for compliance,
energy saving and net zero carbon

COMBAT THE RISING COST OF COMPLIANCE

Businesses face mounting legislative pressure to achieve energy and carbon savings, and to comply with multiple regulations, including ESOS, SECR, CCA and UK ETS. Every scheme requires businesses to gather and monitor data on energy consumption, asset performance, savings achieved and a host of other metrics.

In the face of increasing legislation, it's important to find the most efficient and manageable ways to gather data, manage energy consumption and reduce carbon emissions in order to meet your regulatory obligations.

SIMPLIFY YOUR REGULATORY OBLIGATIONS

One of the most effective ways to fulfil all of these requirements, is to gain accreditation to **ISO 50001** – the internationally recognised standard for energy management systems (EnMS). It provides the foundation for compliance with all environmental regulations and also provides a framework for creating a net zero carbon roadmap to meet your carbon-reduction objectives.

WHY CHOOSE ISO 50001?

ISO 50001 provides a framework to establish best practices for energy management.

Accreditation enables your business to comply with ESOS, while providing a cost and resource-efficient way to meet the requirements of SECR, MGHGR, CCA and other regulations.

It will help you manage, monitor and improve energy performance by controlling your energy consumption and enhancing your operational efficiency. It enables you to embed processes, measurements, behaviours and responsibilities within your organisation that help to achieve consistent energy and carbon savings.

WHAT ARE THE BENEFITS?

As well as supporting compliance with multiple regulations, **ISO 50001 accreditation:**

1

Improves profitability and operational efficiency

through continuous energy savings and cost reductions.

2

Creates a leaner and more agile organisation

by embedding robust energy-management processes into your business.

3

Provides the foundation for a net zero carbon roadmap

supporting your carbon-reduction ambitions.

4

Helps you stay ahead of regulatory changes

by instilling best practice into your business.

5

Strengthens employee motivation

by engaging people in improving environmental performance.

6

Enhances brand reputation

by demonstrating commitment to sustainable development.

OUR PROVEN APPROACH

Our experienced energy-management specialists will work in partnership with you to adapt and develop your procedures and policies to meet the requirements of the ISO 50001 framework.

We will guide you through our proven end-to-end process for achieving accreditation:

1

GAP ANALYSIS

We assess your current energy-management processes and identify the actions needed to meet the requirements of ISO 50001. As part of this process, we will engage with stakeholders and review your company's organisational structure.

2

PLANNING & IMPLEMENTATION

We will work with you to identify your company's energy profile, scope and boundaries for the ISO 50001 framework. We will review and develop your energy policies and set targets and objectives. By pinpointing energy consumption hotspots, we will identify key energy-saving opportunities – and help you implement the changes required.

3

CERTIFICATION

An external accreditor will need to assess your systems and award the ISO certification. We will work closely with your chosen certification company (such as BSI) to facilitate the accreditation process.

4

ONGOING SUPPORT

We will continually support you to monitor and measure energy use, evaluate your performance against targets, and identify areas for improvement. Our specialists will also guide you through the annual audit process required to maintain your accreditation, helping you achieve any improvements required and ensuring you have all the necessary data available.

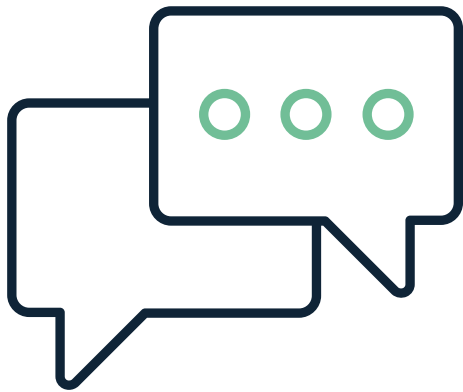

HOW CAN EQUANS HELP?

At a time when businesses face so many competing priorities, dedicating time and resources to achieving ISO 50001 accreditation may seem like a step too far. That's where the specialists at EQUANS can help. We have all the expertise and knowledge required to support your ISO 50001 accreditation – saving you time, effort and resources.

MAINTAINING YOUR ACCREDITATION FOR THE LONG TERM

ISO 50001 is an accreditation that grows and adapts with your business. The compliance team at EQUANS will work in partnership with you to ensure that you continue to maintain the certification standards and achieve cost and energy savings over the long term.

START YOUR ACCREDITATION JOURNEY TODAY

Please email: carboncompliance.uk@equans.com to find out how EQUANS can help your business achieve ISO 50001 accreditation and access the long-term compliance, energy and cost saving benefits.
