

# MOBILE TECHNICAL SERVICES

Responsive FM  
services delivered  
by local specialists

# WHO IS EQUANS?

**Equans is a leading provider of technical, facilities management, regeneration and energy services across the UK and Ireland.**

We deliver fully integrated facilities management services to help public and private-sector businesses improve the energy efficiency of buildings, reduce their carbon footprint and enhance staff wellbeing.

## Rapid response mobile support

Our mobile technical services teams based throughout the UK are responsible for delivering complete facilities management (FM) services for individual premises and multi-site estates.

By operating flexible mobile teams, rather than static on-site teams, we provide more targeted, responsive and value-for-money technical services for premises of all sizes. Our service delivery is designed to ensure we operate all facilities efficiently, safely and in full compliance with relevant regulations.

## Complete range of hard FM services

The mobile services we provide cover maintenance and repair for electrical and mechanical systems, heating ventilation and air conditioning (HVAC), renewable energy, communal and district heating systems, as well as equipment condition assessments and handyman services.

We deliver all FM services in line with the SFG20 industry standard for building maintenance. Our highly qualified mobile teams include mechanical, electrical, air-conditioning and combustion engineers and handymen, working alongside specialist sub-contractors to deliver the complete range of technical FM services.

## Technology-driven FM management

Our FM services go beyond planned and reactive maintenance, using remote-monitoring technology to track the performance and efficiency of building assets.

This enables us to direct mobile engineers to potential issues before they develop into a fault – saving on repair costs and avoiding the risk of damage or business disruption. It also enables us to diagnose problems remotely and to allocate maintenance resources in the most efficient way.

## Flexible approach for bespoke FM solutions

More than just another sub-contractor, Equans leads the way in providing tailored maintenance solutions. When it comes to facilities management, we recognise that one size does not fit all. Our mobile teams enable us to deliver

bespoke FM solutions that meet the specific needs of your business or organisation. We provide targeted FM services for clients in many sectors, including health, defence, retail, finance, government and leisure.

## National capabilities local support

Our mobile FM teams enable us to provide local expertise on your doorstep, combined with all the benefits you'd expect from a national service provider. This includes our in-house 24-hour helpdesk for query handling, reactive requests and emergency call-outs – ensuring we deploy our mobile resources in the most effective and efficient way.

To complement our FM services, we can provide access to the full range of capabilities at Equans, including energy management, net zero support, water treatment and hygiene services, smart building technologies and EV charging solutions.
