

Cheshire East Council

Equans builds on existing relationship in forming new 10-year FM and net zero services partnership with Cheshire East Council.

Building on a successful relationship

Already working with Cheshire East Council to deliver Facilities Management, Capital Projects and Compliance Services, and with expertise in sustainable regeneration, Equans were in an ideal position to help the council to become more sustainable and environmentally conscious.

Under the contract extension, Equans now also serves as a strategic partner to support Cheshire East's ambitious net zero carbon targets.

Comprehensive Facilities Management (FM)

Our FM services ensure that all of the council's facilities are running efficiently, reducing waste, and utilizing the latest in energy-saving technologies. This doesn't just mean savings for the council in terms of expenses but also a significant reduction in environmental impact.

Net-Zero Commitment

This contract isn't just about efficient operations today; it's about building a sustainable tomorrow.

We're working with Cheshire East Council to make strides toward a net-zero carbon future, aligning with the council's ambition to be a leader in environmental stewardship, and helping them achieve their ambitious target to become a net-zero council by 2025.

"This contract builds on what is already a strong partnership between Equans and the Council. To date there has been a great deal of collaboration between us to ensure strategic alignment of our capabilities and ensure high performance delivery of service.

The council has bold and inspiring targets, and as a business with expertise spanning technical services, FM, energy efficiency, housing and regeneration – we are perfectly placed to support them on this journey."
