

Warrington Borough Council

In 2022 Equans formed a partnership with Warrington Borough Council to deliver Reactive Maintenance, Planned Preventative Maintenance (PPM) and minor works. As a result of the positive momentum of the first year we are looking to enter into a three year extension.

Transforming operational performance in no time

Within the first year of the partnership, the inherited backlog of works had been cleared and future planning had already taken shape. The annual Planned Preventative Maintenance (PPM) plan was created and improved with site-specific plans to capture greater depth of the works to be scheduled.

Prioritising the decarbonisation agenda

Given Equans' status at the centre of the nation's journey to a carbon neutral future, the team set to work designing the region's zero-carbon roadmap and taking steps to put these important works into action. Through swift prioritisation and considerable expertise, Public Sector Decarbonisation Scheme (PSDS) funding applications were submitted for two of the council's priority buildings within the first available application window.

A partnership that puts the community first

Equans has given its commitment to deliver 182 hours of volunteering to the Warrington area every year. To ensure all volunteering hours are targeted and aligned, Equans have worked closely with Warrington Borough Council to identify key priorities locally, such as renovating local community centres. In the 18 months since the partnership started, over £110,000 of social value activity has been undertaken in the local area, having a direct and lasting impact on the community we serve.

In future we hope to add Decarbonisation Consultancy and Asset Surveying to the scope of the contract, combining Equans' expertise in Facilities Management and decarbonisation into one package.
